

Managing High Impact High Prevalence Risk In Aged Care

In Aged Care, we often talk about high impact high prevalence risk. **But did you know that it connects to around 65% of your compliance risk?**

Identifying and understanding high impact high prevalence risks is a critical element that will help you to ensure each of your consumers receives safe and quality care whilst also fulfilling your approved provider obligations.

HiRA-E™ stands for High Impact Risk Assessment for Elders and is the first of its kind (and only) online platform that will assist you in proactively managing the high impact and high prevalence risks associated with the older people you support.

What is HiRA-E™?

HiRA-E™ supports your clinical governance and enables you to complete distinct assessments of high impact risk for each individual consumer. HiRA-E™ is not an online care management system or in competition with one.

The platform consolidates all the risks into useful data and produces a clinical risk register for both individuals and your entire community. HiRA-E™ gives you a clear line of sight over all your consumers but in particular the ones with the highest level of risk.

The background to HiRA-E™

The Anchor team all have significant experience working in aged care services and, over the last four years, have worked to support providers in their transformation journeys. The Royal Commission into Aged Care and the subsequent reform agenda has crystalised the focus around clinical care governance, which is why HiRA-E™ was developed.

The HiRA-E™ platform is currently supporting residential aged care providers and home care providers to demonstrate successful management of high-impact risk and clinical and care governance - fundamental to delivering 'dignity of care', meeting quality standards 3 (3) (a) and 8 (3) (b) and fulfilling regulatory obligations.

Reasons to use the HiRA-E

Improves Consumer outcomes, through distinct assessments across over 70 high impact / high prevalence risk triggers

Effective and efficient communications tool for; admission, case conferences, care planning and daily handover

Regulatory compliance with standards 3(3)(a) and 3(3)(b) and supports with Clinical Governance and best practice care delivery

Quick and easy on boarding providing you with data and insights in less than a week

Proactively identifies consumer risk and trends through advanced reporting

Information resources and fact sheets on each High Impact / High prevalence risk for staff and consumers

Developed by industry leaders in alignment with the Aged Care Standards

Online support

Why use HiRA-E for your organisation?

HiRA-E is readily available, easy to implement and cost-effective. For as little as .10c per resident per day, you will have instant access to data and insights that genuinely inform you about your consumer's high impact, high prevalence risk.

The HiRA-E assessment will support your care strategies, ensuring they are appropriate and focused on minimising risk and increasing positive consumer health outcomes. With over 70 high impact, high prevalence risks identified, this is the only platform that enables you to cross-check that your care plans and behaviour support plans are fit for purpose.

The cost of not implementing HiRA-E and having consumers at risk is substantially higher.

The Aged Care industry is under extreme pressure in a highly regulated environment, including factors such as completing self-assessments, preparing for re-accreditation and managing assessment visits from the Aged Care Quality and Safety Commission.

The HiRA-E assessment and clinical risk register has been proven successful, resulting in compliance in meeting quality standards 3 (3) (a) and 8 (3) (b). This is the area that sees the largest number of not mets, as reported in the Aged Care Quality and Safety Commission Sector performance reports in 2021 and in the subsequent National Quality Indicator findings.
